# **SQL** Cheat Sheet: Views, Stored Procedures and Transactions

### Views

Topic	Syntax	Description	Example
Create View	CREATE VIEW view_name AS SELECT column1, column2, FROM table_name WHERE condition;	A CREATE VIEW is an alternative way of representing data that exists in one or more tables.	CREATE VIEW EMPSALARY AS SELECT EMP_ID, F_NAME, L_NAME, B_DATE, SEX, SALARY FROM EMPLOYEES;
Update a View	CREATE OR REPLACE VIEW view_name AS SELECT column1, column2, FROM table_name WHERE condition;	The CREATE OR REPLACE VIEW command updates a view.	CREATE OR REPLACE VIEW EMPSALARY AS SELECT EMP_ID, F_NAME, L_NAME, B_DATE, SEX, JOB_ITILE, MIN_SALARY, MAX_SALARY FROM EMPLOYEES, JOBS WHERE EMPLOYEES.JOB_ID = JOBS.JOB_IDENT;
Drop a View	DROP VIEW view_name;	Use the DROP VIEW statement to remove a view from the database.	DROP VIEW EMPSALARY;

## Stored Procedures in IBM Db2 using SQL

			#SET TERMINATOR @ CREATE PROCEDURE RETRIEVE_ALL
Stored Procedures	#SET TERMINATOR @ CREATE PROCEDURE PROCEDURE NAME	A stored procedure is a prepared SQL code that you can save, so the code can be reused over and over again.  The default terminator for a stored procedure is	LANGUAGE SQL READS SQL DATA
	LANGUAGE		DYNAMIC RESULT SETS 1 BEGIN
	BEGIN		DECLARE C1 CURSOR
	semicolon(;). To set a different terminator we use SET TERMINATOR clause followed by the terminator such as '@'.	WITH RETURN FOR SELECT * FROM PETSALE;	
		•	OPEN C1;
			END @

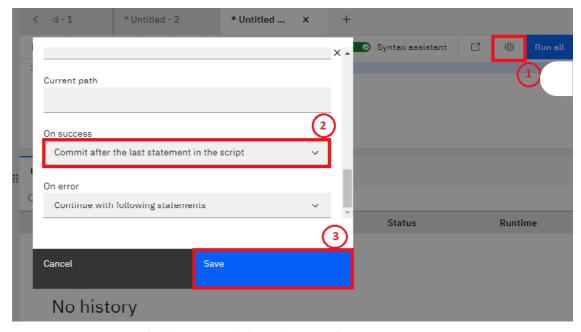

## Stored Procedures in MySQL using phpMyAdmin

command is semicolon (;).

Stored Procedures	DELIMITER //	A stored procedure is a prepared SQL code that	DELIMITER //
	CREATE PROCEDURE PROCEDURE_NAME	you can save, so the code can be reused over and	
	BEGIN	over again.	BEGIN
	END //	The default terminator for a stored procedure is semicolon (;). To set a different terminator we use DELIMITER clause followed by the terminator such as \$\$ or //.	SELECT * FROM PETSALE;
	DELIMITER;		END //
			DELIMITER :

Transactions wit	h Dh2	
Transactions wit	11 1/02	
Commit COMMIT; command	A COMMIT command is used to persist the changes in the database.  The default terminator for a COMMIT command is semicolon (;).	CREATE TABLE employee(ID INT, Name VARCHAR(20), City VARCHAR(20), Salary INT, Age INT);  INSERT INTO employee( ID, Name, City, Salary, Age) VALUES( 1, 'Priyanka pal', 'Nasik', 36000, 21), (2, 'Riya chowdary' 82000, 29);  SELECT *FROM employee; COMMIT;
Rollback ROLLBACK command	***	As auto-commit is enabled by default, all transactions will be committed. We need to disable this option to see rollback works.  For db2, we have to disable auto-commit manually. Click the gear icon located on the right side of the SQL Assis window. Next, select the "On Success" drop-down and choose "commit after the last statement in the script" Remem save your changes!

about:blank 1/3 7/24/24, 5:22 PM about:blank

CREATE TABLE employee(ID INT, Name VARCHAR(20), City VARCHAR(20), Salary INT,

Age INT);

INSERT INTO employee VALUES (3, 'Swetha Tiwari', 'Kanpur', 38000, 38);

SELECT \*FROM employee; ROLLBACK: SELECT \*FROM employee;

### Transactions with MySQL

A COMMIT command is used to persist the changes START TRANSACTION; COMMIT; in the database. Commit INSERT INTO employee( ID, Name, City,
Salary, Age) VALUES( 1, 'Priyanka pal',
'Nasik', 36000, 21), (2, 'Riya chowdary',
'Bangalor', 82000, 29); command The default terminator for a COMMIT command is semicolon (;). SELECT \*FROM employee; COMMIT; As auto-commit is enabled by default, all transactions will be committed. We need to disable this option to see how rollback works. For MySQL use the command  $% \left( 1\right) =\left( 1\right) \left( 1\right) \left($ A ROLLBACK command is used to rollback the ROLLBACK; transactions which are not saved in the database. "SET autocommit = 0;" Rollback command The default terminator for a ROLLBACK INSERT INTO employee VALUES (3, 'Swetha Tiwari', 'Kanpur', 38000, 38); command is semicolon (;). SELECT \*FROM employee; ROLLBACK; SELECT \*FROM employee;

**Db2 Transactions using Stored Procedure** --#SET TERMINATOR @ CREATE PROCEDURE
TRANSACTION\_ROSE LANGUAGE SQL MODIFIES SQL DATA BEGIN DECLARE SQLCODE INTEGER DEFAULT 0; DECLARE retcode INTEGER DEFAULT 0; DECLARE CONTINUE HANDLER FOR SQLEXCEPTION -#SET TERMINATOR @ SET retcode = SQLCODE; CREATE PROCEDURE PROCEDURE NAME UPDATE BankAccounts A COMMIT command is used to persist the changes SET Balance = Balance-200 BEGIN in the database. WHERE AccountName = Commit COMMIT; command UPDATE BankAccounts The default terminator for a COMMIT SET Balance = Balance-300 END command is semicolon (;). WHERE AccountName = 'Rose'; IF retcode < 0 THEN ROLLBACK WORK; ELSE COMMIT WORK; END IF; END --#SET TERMINATOR @ CREATE PROCEDURE Rollback --#SET TERMINATOR @ A ROLLBACK command is used to rollback the TRANSACTION\_ROSE LANGUAGE SQL MODIFIES SQL command transactions which are not saved in the database. CREATE PROCEDURE PROCEDURE NAME DATA BEGIN BEGIN

about:blank 2/3 7/24/24, 5:22 PM about:blank

> ROLLBACK; COMMIT; END

The default terminator for a ROLLBACK command is semicolon (;).

DECLARE SOLCODE INTEGER DEFAULT 0: DECLARE retcode INTEGER DEFAULT 0; DECLARE CONTINUE HANDLER FOR SQLEXCEPTION

SET retcode = SQLCODE; UPDATE BankAccounts SET Balance = Balance-200

WHERE AccountName = 'Rose'; UPDATE BankAccounts SET Balance = Balance-300
WHERE AccountName = 'Rose

IF retcode < 0 THEN ROLLBACK WORK;

ELSE COMMIT WORK; END IF;

END

### **MySQL Transactions using Stored Procedure**

DELIMITER //

CREATE PROCEDURE PROCEDURE\_NAME

BEGIN

Commit command COMMIT; END //

DELIMITER;

DELIMITER //

CREATE PROCEDURE PROCEDURE\_NAME

BEGIN

Rollback command

ROLLBACK;

COMMIT; END //

DELIMITER;

DELIMITER //

CREATE PROCEDURE TRANSACTION\_ROSE()

DECLARE EXIT HANDLER FOR SQLEXCEPTION

BEGIN ROLLBACK: RESIGNAL; END;

A COMMIT command is used to persist the changes in the database. The default terminator for a COMMIT

command is semicolon (;).

START TRANSACTION; UPDATE BankAccounts SET Balance = Balance-200 WHERE AccountName = 'Rose';

UPDATE BankAccounts SET Balance = Balance-300 WHERE AccountName = 'Rose';

COMMIT; END // DELIMITER; DELIMITER //

CREATE PROCEDURE TRANSACTION\_ROSE()

BEGIN

DECLARE EXIT HANDLER FOR SQLEXCEPTION

**BEGIN** ROLLBACK; RESIGNAL; END;

transactions which are not saved in the database. The default terminator for a ROLLBACK

command is semicolon (;).

A ROLLBACK command is used to rollback the

SET Balance = Balance-200 WHERE AccountName = 'Rose'; UPDATE BankAccounts

START TRANSACTION;

UPDATE BankAccounts

SET Balance = Balance-300 WHERE AccountName = 'Rose';

COMMIT; END // DELIMITER;
